## QualySense closes a financing round of CHF 2.1 million

QualySense, a Swiss company focused on innovative grain and seed sorting technology announced today that it has closed a new financing round. The company has raised CHF 2.1 million from a number of Swiss and international business angels and plans to invest the funds in expanding their product range.

*“QualySense aims at becoming a strategic partner within the agro–food community in the next years. This last funding round will allow QualySense to accelerate the development of our product range, enabling us to explore new markets”,* said Alberto Romaneschi, Chairman of the Board.

QualySense use space technologies that combine Machine Vision and Near–Infrared spectroscopy to develop the **QSorter**, the first artificial intelligence robot for high–speed single kernel analysis and sorting of grains. The **QSorter** technology analyzes and sorts each grain individually based on its physical and compositional properties, which enables a reliable and sophisticated control solution aimed at increasing quality and safety of food products, for example in the development of diet–specific food products.

### ABOUT QUALYSENSE

QualySense is a Swiss company pioneering innovative high–speed single kernel sorting solutions to achieve optimal processing, quality, and safety of agricultural products. To learn more, please visit [www.qualysense.com](http://www.qualysense.com).
